

# Use the SPSS 25 Remote App Via Mac

Our licensing allows anyone affiliated with the University - whether student, faculty, or staff - to use our SPSS software. As long as you have a ValpoNet account, you can take advantage!

## Install Remote Desktop Software

Before you use SPSS for the first time, visit the App Store on your Mac to download and install the free "Microsoft Remote Desktop" app. You should only have to do this once.

## Step-by-step guide

1. If you are off-campus, login to VPN via the SonicWALL Mobile Connect software.
2. Double-click the SPSS25.rdp app that was provided to you.
  - a. On campus it can also be downloaded from \\valpo.edu\data2\RemoteApp\RDP files\SPSS25.rdp
  - b. Off campus using Webstorage it can be downloaded from S:\RemoteApp\RDP files\SPSS25.rdp
3. If a "Verify Certificate" box pops up, click Continue.
4. On the RemoteApp login screen, enter your ValpoNet credentials, making sure to format your username this way: valpo\username
5. Click OK. SPSS should launch.

## Logout When Finished

When you are finished, Quit (command-Q) the Remote Desktop app, then disconnect your VPN session by clicking the Disconnect button in the Mobile Connect app.

## LinkedIn Learning with Lynda.com content

More specific information on how to use SPSS is available via our [LinkedIn Learning with Lynda.com content](#) campus subscription. Login with your ValpoNet credentials.
